AMMAR HAIDER

Data Engineer | SQL · Python · Azure Databricks · Microsoft Fabric · ETL/ELT

Antwerp, Belgium • +32 466 40 93 24 • ammarnaqvi561@gmail.com

PROFESSIONAL SUMMARY

Data engineer with hands-on experience building modern cloud data platforms on Azure Databricks and Microsoft Fabric, from ingestion to Bronze-Silver-Gold layers, quality checks and dashboards. Optimised workloads to cut query latency by 40% and storage costs by 25%, built automated validation that reached 99%+ accuracy, and delivered several end-to-end projects across streaming, batch and supply chain data. Strong in SQL and Python, works with Git, unit tests, CI and Docker, and takes ownership of work from first requirement to delivery. Looking to join a consulting team and grow across varied client data platform projects with strong mentoring.

CORE SKILLS

Cloud data platforms: Azure (Databricks, Fabric, Event Hubs, Azure SQL), Delta Lake, Unity Catalog; Bronze-Silver-Gold (medallion) architecture

Data engineering: ETL/ELT pipelines in Python, SQL and PySpark; batch and streaming ingestion (Auto Loader, Structured Streaming); fact and dimension modelling, SCD2, partitioning and ZORDER

Data quality & reliability: Automated validation, breach alerts, reconciliation, retries and SLA monitoring in Databricks Workflows

Analytics delivery: Power BI dashboards for 50+ stakeholders; turned business requirements into datasets, KPIs and documented metrics

Engineering practices: Git and GitHub, unit tests, GitHub Actions CI on every push, Docker; clean, documented code

Teamwork & ownership: Worked with analysts, engineers and business stakeholders; presented a dashboard directly to a CEO

TECHNICAL STACK

BI tools: Power BI (DAX, semantic models, incremental refresh), Paginated Report Builder, Microsoft Excel

Languages: SQL (advanced), Python (Pandas, NumPy, PySpark)

Data pipelines & architecture: ETL/ELT, Azure Databricks, Delta Lake, Microsoft Fabric, layered Bronze-Silver-Gold data models

Tools: Power Automate, Git, GitHub, GitHub Actions, Docker, SharePoint, Microsoft 365

PROFESSIONAL EXPERIENCE

Analytics & Data Engineer (Project Role)

Jun 2026 – Aug 2026

Estée Lauder Companies | Westerlo, Belgium

- Designed and supported ETL/ELT pipelines on Azure Databricks and Microsoft Fabric, consolidating several source systems into Bronze-Silver-Gold layers
- Built automated data quality checks and breach alerts, validating 99%+ accuracy before data reached business reports
- Configured Databricks Workflows with retries and SLA monitoring for reliable scheduled runs
- Tuned PySpark workloads with partitioning and ZORDER, reducing query latency by 40% and storage costs by 25%
- Worked with stakeholders to turn requirements into datasets and Power BI dashboards used by 50+ people, and documented data definitions

Data and Automation Intern, Site Hygiene Team

Feb 2026 – Jun 2026

Estée Lauder Companies | Westerlo, Belgium

- Turned a 12-week manual reporting workflow into a single-click reporting system using Power BI Paginated Report Builder and Power Automate
- Wrote SQL queries in Databricks to extract, clean, reconcile and validate large operational datasets before reporting
- Integrated an AI agent into the reporting workflow to generate report summaries

IT Support Engineer

Apr 2025 – Present

Intact Insurance | Antwerp, Belgium

- Point of contact between IT teams and business users, troubleshooting issues and documenting solutions for knowledge transfer

PROJECTS

End-to-End Restaurant Chain Lakehouse *Azure Databricks · Event Hubs · Lakeflow Connect · Unity Catalog · Databricks SQL*

- Built a streaming and batch platform (Azure Event Hubs, Azure SQL via Lakeflow Connect) into Bronze-Silver-Gold fact and dimension tables, governed with Unity Catalog
- Added AI sentiment analysis on customer reviews and Gold tables for sales, customer 360 and restaurant reviews; code on GitHub

Refrigerator Ships Production ETL *Azure Databricks · PySpark · Delta Lake · Auto Loader*

- Ingested IoT sensor and fleet API data with Auto Loader, handling 50K+ records per day, with anomaly detection and SCD2 history in the Silver layer
- Built Gold metrics for temperature compliance and delivery performance; cut query time from 8 minutes to 45 seconds with ZORDER and partitioning

E-Commerce Lakehouse Platform *Azure Databricks · PySpark · REST APIs · Streaming · Power BI*

- Integrated 5 source systems (APIs, streams, CSV, JSON, GitHub) into Medallion layers with SCD2, referential integrity checks, unit tests and incremental Power BI refresh

OTIF Supply Chain Pipeline *Python · Pandas · Git · GitHub Actions · Docker*

- Reconciled ERP, MES and WMS data into an on-time-in-full KPI, with unit tests and an automated CI check on every push

EDUCATION

Bachelor of Business, Data Science, Protection and Security 2023 – 2026

Thomas More University of Applied Sciences | Mechelen, Belgium

Coursework: Business Intelligence, Database Systems, Statistical Analysis, Data Engineering, Data Modelling, Machine Learning, Python

CERTIFICATIONS

- Databricks AI Fundamentals — Databricks, 2026
- Microsoft AI Fest, Analytics and AI — Microsoft, 2026
- Deloitte Data Analytics Virtual Experience — Deloitte / Forage, 2025
