

AMMAR HAIDER

DATA ENGINEER — AZURE DATABRICKS, MEDALLION ARCHITECTURE, PYSPARK

Mechelen, Belgium | +32 466 40 93 24 | ammarnaqvi561@gmail.com

PROFILE

Data engineer with hands-on experience building and optimising Databricks-based Lakehouse platforms using Medallion (Bronze-Silver-Gold) architecture. Has designed ETL/ELT pipelines in PySpark, ingested data from multiple sources (flat files, APIs, databases), and implemented Microsoft Fabric and Delta Lake as central platform layers for scalable storage and transformation. Applies automated data quality checks and governance practices as a core part of delivery, and works closely with business stakeholders and analysts to translate requirements into trusted, consumption-ready datasets. Comfortable with Git-based delivery workflows and CI/CD. Early in a data engineering career and building toward the depth of a more senior, production-scale Databricks platform role through focused, hands-on project work.

CORE SKILLS

Databricks & Lakehouse Azure Databricks • Medallion architecture (Bronze/Silver/Gold) • Delta Lake • Auto Loader • Structured Streaming	Data Engineering PySpark • ETL/ELT pipeline design • SQL (Advanced) • Python (Pandas)	Cloud & Platform Microsoft Azure • Microsoft Fabric • ADLS Gen2
Quality & Governance Automated data quality frameworks • Data governance • GDPR-compliant handling	Delivery & DevOps Git version control • GitHub Actions CI/CD • Docker & Kubernetes	Stakeholder & BI Requirements gathering • Business/technical liaison • Power BI dashboards

PROFESSIONAL EXPERIENCE

Analytics & Data Insights Specialist

Estée Lauder Companies, Westerlo, Belgium | Jun 2026 – Present

- Independently scoped and delivered an end-to-end pipeline from raw multi-source data (flat files, Databricks tables, CAPA system) to polished executive reports, where no solution had existed before.
- Built Python extraction and cleaning scripts across file, Databricks, and CAPA sources, and implemented Microsoft Fabric as the central data platform layer for scalable storage and transformation.
- Collaborated directly with stakeholders to gather requirements and deliver trusted, consumption-ready datasets and reporting.
- Established automated data quality checks achieving 99%+ accuracy, using Git-based version control throughout.

Data and Automation Intern, Site Hygiene Team

Estée Lauder Companies, Westerlo, Belgium | Feb 2026 – Jun 2026

- Wrote SQL queries to extract, clean, and shape a large customer complaints dataset in Databricks, ensuring accurate metrics before they reached the visual layer.
- Built an automated pipeline (Power Automate + Python) replacing a 12-week manual reporting cycle with a single-click solution.

RELEVANT PROJECTS

E-Commerce Lakehouse Platform | Azure Databricks, PySpark, REST APIs, Structured Streaming

- Unified data across 5 distinct source systems into Medallion data layers with SCD Type 2 history tracking.
- Implemented automated data quality frameworks (null validation, referential integrity checks) and incremental Power BI refresh.

Refrigerator Ships Production ETL Pipeline | Azure Databricks, PySpark, Delta Lake, Auto Loader

- Ingested IoT sensor and fleet API data (50K+ daily records) into a central Delta Lake repository.
- Optimised query execution time from 8 minutes to 45 seconds using ZORDER clustering and partitioning.

Data Pipeline CI/CD DevOps Platform | GitHub Actions, Docker, Kubernetes, Python

- Built automated CI/CD pipelines with GitHub Actions for unit and integration testing of PySpark workflows.
- Built infrastructure-as-code scripts for automatic environment provisioning, reducing manual setup time by 80%.

EDUCATION

Bachelor of Business — Data Science, Protection and Security

Thomas More University of Applied Sciences, Mechelen, Belgium | 2023 – 2026

CERTIFICATIONS

Databricks AI Fundamentals — Databricks (2026) | Microsoft AI Fest — Analytics & AI — Microsoft (2026) | Deloitte Data Analytics Virtual Experience — Deloitte/Forage (2025)
