

AMMAR HAIDER

Junior Data Scientist Candidate — Data Analytics, Power BI, Machine Learning, Data Architecture

Mechelen, Belgium • +32 466 40 93 24 • ammarnaqvi561@gmail.com • linkedin.com/in/ammarn-haider-51a8a8259

PROFESSIONAL SUMMARY

Data-driven analyst and engineer who turns raw, multi-source data into clear, actionable insight for business decision-makers. Hands-on experience designing and maintaining Power BI dashboards, data models, and reporting pipelines on Databricks and Microsoft Azure/Fabric, with a growing focus on data architecture reliability, performance, and scalability. Comfortable acting as the link between process owners and technical teams: gathering requirements, defining clear metrics, and delivering reporting that non-technical stakeholders can trust and act on. Applies machine learning and analytical techniques to surface patterns in real data, most recently building a fraud-detection model on e-commerce transactions. Motivated to grow from Junior Data Scientist into a Business Analyst role, and to bring that same rigor to Christeyns' sustainability and ESG reporting ambitions.

KEY SKILLS RELEVANT TO THIS ROLE

- Translating raw and complex data from multiple internal and external sources into clear, actionable insights for process owners and management
- Designing, developing and maintaining dashboards, data models, and reporting pipelines that make business processes measurable and transparent
- Contributing to data architecture and infrastructure improvements with a focus on reliability, performance, and scalability
- Building user-friendly visualizations and reports in Power BI, supported by Databricks and Microsoft Azure/Fabric
- Applying machine learning and analytical techniques to identify patterns and enrich data (fraud/anomaly detection model in Python)
- Aligning data, visualization and reporting needs with business stakeholders while working closely with technical/IT teams
- Solid SQL and Python foundation, with hands-on ETL/ELT and data quality experience
- Comfortable growing into new tools and platforms quickly (e.g. Microsoft Fabric, Power Automate, Paginated Report Builder, all picked up on the job)

TECHNICAL SKILLS

- Data & Analytics Platforms: Databricks, Apache Spark, PySpark, Delta Lake, Microsoft Azure, Microsoft Fabric
- BI & Visualization: Power BI (data modelling, DAX, Paginated Report Builder, dashboards), Tableau
- Programming & Machine Learning: Python (Pandas, NumPy, scikit-learn), SQL (advanced)
- Data Architecture & Quality: ETL/ELT pipeline design, data quality frameworks, data governance, Git version control
- Automation: Power Automate, GitHub Actions

PROFESSIONAL EXPERIENCE

Analytics & Data Insights Specialist (Project Role)

Jun 2026 – Aug 2026

Estée Lauder Companies — Westerlo, Belgium

- Independently scoped and delivered an end-to-end reporting pipeline from raw multi-source data (flat files, Databricks tables, LIMS system) to polished executive reports, where no solution had existed before
- Built Python extraction and cleaning scripts across file, Databricks, and LIMS sources, and implemented Microsoft Fabric as the central data platform layer for scalable storage and transformation
- Collaborated directly with stakeholders to gather business requirements, translating strategic goals into functional specifications, user stories, and clear reporting roadmaps
- Designed and delivered interactive Power BI dashboards and Paginated Report Builder reports for 50+ business users, using Git-based version control throughout
- Served as primary liaison between business and technical teams, establishing automated data quality checks with 99%+ accuracy

- Documented data definitions, metric logic, and business use cases to ensure consistency and support future team onboarding

Data and Automation Intern, Site Hygiene Team

Feb 2026 – Jun 2026

Estée Lauder Companies — Westerlo, Belgium

- Scoped, designed, and delivered an automated pipeline (Power Automate + Python) replacing a 12-week manual reporting cycle with a single-click solution, a 95% reduction in manual effort
- Connected pipeline outputs to Power BI dashboards with decision-ready KPI stories, and integrated an AI agent to auto-generate meaningful conclusions from report data
- Wrote SQL queries to extract, clean, and shape a large customer complaints dataset in Databricks, ensuring accurate metrics before they reached the visual layer
- Iterated on requirements directly with business stakeholders using agile methods to refine KPIs and improve report usability and adoption

IT Support Engineer

Apr 2025 – Present

Intact Insurance — Antwerp, Belgium

- Acted as a technical point of contact between IT systems and non-technical stakeholders, troubleshooting issues and documenting solutions for knowledge transfer

RELEVANT PROJECTS

Climate Change Impact on Global Food Supply

Python · Random Forest · Pandas · Data Visualization

- Ran an end-to-end data science analysis of how climate change affects global crop production, examining temperature and precipitation trends, CO2 concentration effects, and the uncertainty around projected impacts
- Built a Random Forest regression model to quantify the relationship between climate variables and crop production outcomes
- Visualized model results with a forest plot of regression coefficients, communicating variable importance and uncertainty ranges in an interpretable way
- Combined strong data visualization with statistical modelling to turn a complex, multi-variable climate dataset into a clear, decision-relevant narrative

Housing Price Prediction — Random Forest Regression

Python · scikit-learn · Pandas · NumPy · Matplotlib

- Built an end-to-end ML pipeline (ColumnTransformer + Pipeline) to predict median house values across California districts, with median imputation for numeric features and one-hot encoding for categorical features, fitted only on training data to avoid data leakage
- Trained and evaluated a 300-tree Random Forest Regressor, achieving an R^2 of 0.817 and a Mean Absolute Error of approximately \$32,600 on unseen test data
- Performed residual analysis and feature importance ranking to interpret model behaviour and validate prediction reliability

Auckland Cycling Demand Forecasting — Facebook Prophet

Python · Facebook Prophet · Pandas · scikit-learn

- Merged daily cycling count data with weather data (sun, wind, rain, temperature) into a single time series dataset to forecast 2018 cycling demand in Auckland
- Built and compared multiple Prophet forecasting models incorporating weekly/yearly seasonality, holiday effects, and external weather regressors, benchmarked against a weekday-mean baseline
- Tuned the changepoint prior scale hyperparameter and validated final model performance using Prophet's built-in time series cross-validation

Fraud Detection Model — E-Commerce Transactions

Python · scikit-learn · Pandas · Machine Learning

- Built a machine learning model to flag suspicious transactions within an e-commerce order and payment dataset, applying pattern detection to real-world data

Gender and Age Detection System

Python · Computer Vision · Deep Learning

- Built an AI-based system using computer vision and deep learning to predict a person's gender and approximate age from an image or video stream

- Applied pre-trained face detection and classification models to analyze facial features and generate real-time predictions

WHAT A MANAGER SAYS

“During his internship, Ammar explored tools like Paginated Reports with Power BI, and the potential of AI to support and generate meaningful conclusions from reporting. He showed flexibility, curiosity, and a strong willingness to learn new technologies.”

— Els Daenen, Sr. Manager Quality Data, Estée Lauder Oevel (direct manager)

CERTIFICATIONS

- Databricks AI Fundamentals — Databricks (2026)
- Microsoft AI Fest — Analytics & AI — Microsoft (2026)
- Deloitte Data Analytics Virtual Experience — end-to-end analytics using Tableau (2025)

EDUCATION

Bachelor of Business — Data Science, Protection and Security

Thomas More University of Applied Sciences, Mechelen, Belgium • 2023 – 2026

Key coursework: Data Engineering, Database Systems, ETL Pipeline Design, Data Modelling, Statistical Analysis, Machine Learning, Python Programming, Cloud Computing

LANGUAGES

English — Proficient (Professional) • Dutch — A2, actively progressing toward B1
